Education

University of Nevada, Las Vegas

Aug. 2023 - May 2027

Bachelor of Science in Computer Engineering, Dean's Honour List

Skills

Languages: Proficient in C++, C#, Python, HTML, and CSS, Assembly (86, MIPS), TypeScript, JavaScript, Java, Verilog

Tools: Xcode, Visual Studio Code, Fusion 360, Blender, Autodesk, AutoCAD, PyCharm, Quartus, FPGA

Mechanical: Welding, drilling, soldering, wire termination

AWS: (Cloud Practitioner, Networking) | Amazon Web Services (AWS)

Experience

Classroom Technology Student Worker | *University of Nevada, Las Vegas - Information Technology* Nov. 2024 - Sep. 2025

- Supported and maintained AV/IT systems across **100+** university classrooms while leading classroom modernization projects, equipment installations, and end-to-end system verification.
- Developed and customized UI touch panel interfaces to improve accessibility, instructional flow, and consistency of the user experience across campus classrooms.
- Configured and optimized Biamp **DSP routing**, DMPS/HDMI switching, and networked AV systems for reliable audio and video delivery.

Real Estate Data & MLS Coordinator | *Independent Realtor*

March 2020 - Feb. 2024

- Maintained and updated AWS-hosted MLS listings and content using EC2, S3, Route 53, and CloudFront with IAM security practices that attracted 1,400+ occasional clients and 100+ recurring investors over its lifespan.

Projects

AutoCAD Floor Plans and Blueprints | *AutoCAD, Fusion360*

- Designed and drafted detailed 2D floor plans and blueprints for **residential homes and school facility buildings**, ensuring accurate scaling, dimensioning, and adherence to architectural standards.
- Utilized **Fusion 360** alongside AutoCAD to create 3D models from 2D plans, enabling clearer visualization of spatial layouts before construction.

Rebel Locate - UNLV Geolocation System | *Team project, Python, PyTorch, EXIF, KNN, CNN*

- Engineered a machine learning-based geolocator that predicts a photo's building and room using extracted and organized **EXIF metadata** on the UNLV campus using a self-captured database of over **6,000+ geotagged images**.
- Leveraged **ArcGIS** to visualize, validate, and spatially analyze GPS coordinate data across campus, ensuring geolocation accuracy and identifying spatial clustering patterns used to refine model inputs.
- Fine-tuned a **Convolutional Neural Network (CNN)** using MIT's Places365 pretrained weights to predict and classify rooms and buildings, achieving an average **test accuracy of 81%**.

FPGA Sudoku | *Team Project, SystemVerilog, Intel DE2-115 FPGA, Quartus Prime*

- Engineered an interactive Sudoku game entirely in hardware using **SystemVerilog** on the Intel DE2-115 FPGA, featuring real-time VGA graphics and hardware-based user controls.
- Designed and implemented modular digital logic for cursor navigation, board state management, and switch-driven number input using **finite state machines** and synchronous memory modules.
- Developed a VGA rendering pipeline with Character ROM support to display the Sudoku grid, cursor highlighting, and numeric values directly through FPGA hardware.

Leadership

Lead Software Engineer | *ACM UNLV*

Aug. 2024 - Present

- Contributed to the development of ACM UNLV's official website using Next.js, Tailwind CSS, and shadcn/ui, creating a modern platform to showcase club events, resources, and initiatives.
- Designed and implemented responsive UI components, including an animated landing page built with Figma and CSS, improving the overall user experience and visual engagement.
